

Take-Home Assessment: Mindshare Senior GTM Data Analyst

Role: Senior GTM Data Analyst — Mindshare

Time to Complete: 2 hours maximum

Deliverable: 3 slides + 30-minute presentation

Overview

You're a Senior GTM Data Analyst at Intercom on the **Mindshare team**. Mindshare owns Intercom's top-of-funnel brand presence — the awareness, organic and direct web traffic, and demand creation that fills the pipeline *upstream* of paid acquisition.

For FY27 planning, the CMO believes brand investment is underweight and wants to make Mindshare a strategic priority. Your task is to analyze 18 months of web traffic and pipeline data, identify where brand is and isn't working, and recommend an FY27 mindshare strategy.

The Situation

Company Context:

- **Intercom** is a customer service platform serving 25,000+ businesses.
- **Fin** is our flagship AI Agent that resolves up to 50% of customer support questions instantly.
- **Mindshare** is the GTM function that owns brand awareness, organic web presence, and demand *creation* (vs. demand *capture*).
- We measure mindshare across: direct + organic web visits, brand-search reach, channel mix, regional brand health, and the downstream MQL → S1 conversion of brand-sourced traffic.

Business Challenge: The CMO needs data to answer:

- Is our mindshare growing? Where (region, segment) is it growing — and where is it stalling?
- Which channels *build* awareness vs. *capture* existing demand? Are we over-invested in capture?
- Does brand-sourced traffic actually convert? Do warm channels (Direct, Organic, Referral) produce higher-quality MQLs than paid channels?
- What's the right FY27 mindshare investment mix — by channel, region, and segment?

Your stakeholders:

- **CMO** — Believes brand investment is underweight; wants data-backed proof points.
 - **VP Demand Gen** — Skeptical of brand-only metrics; wants pipeline impact, not vanity metrics.
 - **Head of Mindshare (your boss)** — Needs to defend Mindshare's contribution to pipeline and recommend FY27 allocation.
 - **Regional Marketing Leads (NAMER / EMEA / APAC)** — Want to know where to invest brand dollars regionally.
-

The Data

You've been provided **3 CSV files** containing 18 months (Dec 2024 – Jun 2026) of **anonymized** data extracted from Intercom's production Snowflake warehouse. The structure mirrors the live tables (`fct_web_visits` , `prv_mql_engagement` , `dim_leads`) — so the analytical patterns you apply here are the same ones you'd use on day one of the role.

Anonymization applied: All cookie IDs, emails, lead identifiers, IP addresses, and user agents have been removed. Data is aggregated to weekly grain, and any cell with fewer than 10 underlying entities is suppressed (NULL) to preserve k-anonymity.

1. `web_visits_weekly.csv` (24,513 rows)

Weekly web-visit aggregates by channel × region × visit path category. Mirrors `INTERCOM_PROD.CORE_GTM.FCT_WEB_VISITS` with production exclusions applied (`is_prospect_visit = TRUE` and `is_included_visit = TRUE` — bots, security scanners, app-logout traffic, and self-referrals already removed).

Columns:

- `week_start` — ISO week start (YYYY-MM-DD)
- `region` — NAMER, EMEA, APAC, LATAM, Unknown
- `attribution_channel_group` — Direct, Organic, Paid, Powered By, Other (5 production groups)
- `visit_path_category` — 35 categories including Homepage, Pricing, Demos, Contact Sales, Blog & Resources, Fin Product, Fin Blueprint, Fin Events, Fin Solutions, Customer Stories, Learning Center, ROI Calculator, Competitive Comparisons, Early Stage Program, Powered By, Other
- `total_visits` — count of visits
- `unique_cookies` — distinct cookies (proxy for unique visitors)
- `marketing_site_pageviews` , `pricing_page_visits` , `demo_page_visits` , `blog_visits`
- `cta_clicks` , `demo_form_submits` , `contact_sales_submits`
- `signup_visits` , `successful_signups`

2. `mql_funnel_weekly.csv` (1,612 rows)

Weekly MQL grain by region × segment × sales motion × MQL type. Mirrors `INTERCOM_PROD.PRIVATE_GTM_ANALYTICS.PRIV_MQL_ENGAGEMENT`.

Columns:

- `week_start`
- `region` — NAMER, EMEA, APAC, LATAM
- `company_reporting_segment` — VSB, SB, MM, ENT, Unknown
- `sales_motion` — inbound, outbound
- `mql_type` — MQL-Demo, MQL-Trial, MQL-Contact Sales, MQL-Event, MQL-Webinar, MQL-Nurture, MQL-Content Download, MQL-Content Syndication
- `core_noncore` — Core (Demo/Trial/Contact Sales/Livechat) / Non-Core
- `total_mqls`, `engaged_mqls`, `s1_conversions`, `s2_conversions`

3. `utm_source_weekly.csv` (323 rows)

Weekly UTM-source attribution for MQLs — joins `prv_mql_engagement` ↔ `dim_leads` on email. Lead-level data fully aggregated away; only counts remain.

Columns:

- `week_start`
- `utm_source_category` — Direct/Unknown, Google, Email, Other (4 effective categories from production data; Direct/Unknown dominates because `dim_leads.utm_source_last` is sparse — a real finding to investigate)
- `region`
- `total_mqls`, `s1_count`, `s2_count`, `s1_conversion_rate_pct`, `s2_conversion_rate_pct`

Data Notes:

- Data spans Dec 2, 2024 – Jun 1, 2026 (78 ISO weeks).
- Attribution: last-touch within 90 days of MQL date (matches production methodology).
- Cells with <10 underlying entities are NULL-suppressed.
- UTM long-tail bucketed into top 10 categories + Other.
- Inbound vs. outbound is included so candidates can isolate brand-sourced inbound from outbound prospecting.

Your Assignment

Part 1: Analysis (2 hours max)

Using SQL, Python/pandas, Excel, or any tool you prefer:

1. **Define mindshare** — This is intentionally open-ended. How would *you* define and measure mindshare from this dataset? Justify your proxies (e.g., direct visits + organic-brand search + branded referral as awareness signals; pricing-page reach as buying-intent signal).
2. **Trend the signal** — Is mindshare growing across the 18-month window? Quantify the trajectory overall, by region, and by segment. Look for inflections — what changed, when, and is it signal or noise?
3. **Channel role analysis** — Which channels are awareness-building (large reach, low immediate conversion) vs. demand-capturing (smaller reach, high conversion)? Are we over-invested in capture? A useful starting point: the gap between channel visit-share and channel MQL-share.
4. **Quality of mindshare traffic** — Do warm channels (Direct, Organic, Referral) produce higher-quality MQLs — better S1 conversion rate, higher Core MQL ratio, faster engagement — than paid channels? If yes, quantify the leverage of shifting mix toward brand.
5. **Regional / segment recommendations** — Where is mindshare under-developed relative to pipeline opportunity (e.g., EMEA Enterprise traffic share vs. MQL share)? Which regions or segments should receive incremental FY27 brand investment?
6. **FY27 recommendation** — Quantify: "Shift \$X of FY27 budget from Y to Z to achieve A% lift in mindshare." Be prepared to defend the numbers under stakeholder pressure.

Part 2: Presentation (30 minutes)

Create **3 slides maximum**. Quality over quantity — assume the CMO and VP Demand Gen are in the room and will challenge every number.

Data Files Included

[Google Sheet link — to be provided by recruiter]

Status: The three anonymized CSVs have been extracted from production Snowflake and audited (zero PII, k-anonymity floor verified at 10). Files: `web_visits_weekly.csv` (1.5MB), `mql_funnel_weekly.csv` (86KB), `utm_source_weekly.csv` (15KB). Date range: Dec 2, 2024 – May 25, 2026 (78 ISO weeks).

Reference Snowflake tables (for context only — candidates do not need warehouse access):

- `INTERCOM_PROD.CORE_GTM.FCT_WEB_VISITS`
- `INTERCOM_PROD.PRIVATE_GTM_ANALYTICS.PRIV_MQL_ENGAGEMENT`
- `INTERCOM_PROD.CORE_GTM.DIM_LEADS`

Submission Instructions

Submit by: [Date/Time provided by recruiter]

What to submit:

1. Your 3 slides (PDF or PowerPoint).
2. Your analysis code/queries (optional but encouraged — SQL script, Jupyter notebook, or Excel file).

How to submit: Email to `cara.debbaudt@intercom.consulting` with subject: "Mindshare Take-Home — [Your Name]"

Presentation Format

When: [Scheduled time — 30 minutes]

With: Raunak Kumar (Hiring Manager), Matthew Kong (Sr. GTM Data Analyst), and 1–2 cross-functional partners.

Format:

- ~10 minutes: Walk us through your 3 slides.
- ~20 minutes: Q&A and discussion.
- We may interrupt with questions — that's intentional.

What to expect:

- Methodology questions: "How did you define mindshare? Why those proxies?"
- Challenge questions: "VP Demand Gen says brand is a vanity metric — convince him otherwise."
- Deep dives: "Walk us through that EMEA insight — what's driving it?"
- Statistical rigor: "Is that trend significant, or noise?"

This simulates a real stakeholder meeting where you present analysis and defend recommendations to senior marketing leadership.

What We're Evaluating

- **Analytical rigor** — do the numbers actually support the recommendation?

- **Marketing fluency** — do you understand brand vs. capture, attribution, and mindshare as a strategy?
- **Communication** — can you tell a clear story to a skeptical exec audience?
- **Business judgment** — is the FY27 recommendation realistic, prioritized, and quantified?

Good luck! We're excited to see your analysis.

If you have questions about the prompt, reach out to your Recruiter.
